EDUCATION

Polytechnic University of the Philippines

Bachelor of Science in Computer Science (BSCS) - 3rd Year

Sta. Mesa, Manila

Oct 2022 - Present

- GWA: 1.23, Consistent President's Lister and DOST MERIT JLSS Scholar

PROJECTS

HomeRoom

Rental Management Platform for Landlords and Tenants

- Led development of a full-stack rental management system using **Laravel**, helping landlords and tenants manage payments, records, and communication in one platform.
- Designed the **database schema** and implemented **queued jobs**, **scheduled tasks**, and a **real-time chat system** using **Laravel Ververb**, supporting billing automation, overdue status updates, messaging, and file sharing.
- Set up **GitHub Actions** for automated testing using **Pest** and code style enforcement using **Laravel Pint**, ensuring code quality and reducing regressions through continuous integration workflows.

Yappr

Minimal Social Media Platform

- Built a responsive social app using **Laravel**, allowing users to register, manage profiles, create posts, and react to content.
- Implemented core features like post creation, single-reaction support, and a global post feed, with a mobile-first interface, supported by a structured database schema and authorization policies to control user actions.

Deparavia

Patient Admission and Record Management System

- Led development using **React**, **Node.js**, **Express.js**, and **MySQL**, implementing secure role-based logins for patients, doctors, and visitors.
- Built features for recording patient details, handling admission requests, and logging doctor visits, making hospital data easier to track and manage.

Path Pundit

Route Optimization App for Couriers

- Implemented role-based authentication with **Node.js** and **Express**, limiting access to authorized couriers and riders.
- Developed a route optimization algorithm using the Travelling Salesman Problem (TSP) and distance matrices, and built the frontend with **React** and **Leaflet** to visualize the fastest routes in real-time.

SKILLS

Languages/Frameworks: HTML, CSS, Javascript, Typescript, React, Bootstrap, TailwindCSS, Node.js, Express.js, Java, PHP, Laravel, MySQL, PostgreSQL

Tools: Git, GitHub, Jest, Pest, PHPUnit, Webpack, Vite, Postman, Figma

Development/Concepts: Unit Testing, REST APIs, Responsive Design, Authentication, OOP, Data Structures, Frontend, Backend

EXTRACURRICULAR

PUP The Programmers' Guild (PUP TPG)

July 2023 - Dec 2023

Frontend Contributor

- Developed and integrated the Info Section and the Hero Section for the official organization website, leveraging React, Next.js, and TypeScript, improving the content structure and accessibility for prospective members.

PUP Association of Students for Computer Intelligence Integration (PUP ASCII)

Nov 2022 - Jun 2023

Subcommittee Member for Research & Extension

- Developed event materials and published bite-sized programming tips and tricks on the official PUP ASCII Facebook page to engage members and promote coding knowledge.
